

### Assignment-1: Warm-up

**Instructions:**

- [1] Any plagiarism will lead to award of **F grade STRICTLY**
- [2] Use python only for the implementation of all the assignments
- [3] Use NumPy to represent the vector and array
- [4] Do not use the inbuilt functionality of any library including NumPy until suggest so.
- [5] PyTorch must be used to implement the deep learning-based methods.
- [6] One mark will be deducted for each late day.
- [7] Submit via Moodle only. Email submissions won't be considered.

No.	Question	Marks
1	<p>Data source: ImageNet: <a href="http://www.image-net.org">http://www.image-net.org</a></p> <p>Write a program to</p> <ol style="list-style-type: none"> <li>1. load an RGB image of any image format (JPG, PNG, etc.) and size using OpenCV and convert it to gray image with a resolution of 256x256.</li> <li>2. Display both RGB and Gray image side-by-side using matplotlib</li> <li>3. Save the Gray image as &lt;same-name&gt;.JPG.</li> <li>4. Flip the RGB Image horizontally and vertically and display the original and flipped images side-by-side.</li> <li>5. Perform random crops of 128x128 and rescale it to 256x256. Display the center point and a rectangle of 128x128 on the RGB image and cropped &amp; scaled image side by side.</li> </ol>	10
2	<p>Data source: Use videos from KTH: <a href="https://www.csc.kth.se/cvap/actions/">https://www.csc.kth.se/cvap/actions/</a> and UCF101: <a href="https://www.crcv.ucf.edu/data/UCF101.php">https://www.crcv.ucf.edu/data/UCF101.php</a></p> <p>Write a program to load a sample video of any video format (AVI, MP4, etc.) using OpenCV and extract its every k<sup>th</sup> frame (k is used specified) with original color representation (RGB/Gray) and rescale to 256x256 size and save them with &lt;frame-number&gt;.JPG to a folder &lt;video-name&gt;</p>	5
3	<p>Data source: MNIST: <a href="http://yann.lecun.com/exdb/mnist/">http://yann.lecun.com/exdb/mnist/</a></p> <ol style="list-style-type: none"> <li>1. Write a program to represent each image in train/test datasets to a frequency histogram and save to comma separated values (CSV) files as train.csv and test.csv</li> <li>2. Normalize each feature to N(0,1) also apply the respective transformations to test data.</li> <li>3. Use the t-SNE plot of the dataset with different color to different class. T-SNE: <a href="https://scikit-learn.org/stable/modules/generated/sklearn.manifold.TSNE.html">https://scikit-learn.org/stable/modules/generated/sklearn.manifold.TSNE.html</a></li> <li>4. Implement the least square method and evaluate on the dataset generated. Use for any two classes as well as all classes.</li> </ol>	10
4	<p>Data source: ImageNet: <a href="http://www.image-net.org">http://www.image-net.org</a></p> <p>Write a program to:</p> <ol style="list-style-type: none"> <li>1. load an RGB image of any image format (JPG, PNG, etc.) and resize using</li> </ol>	10

	<p>OpenCV with a resolution of 256 x 256.</p> <p>2. Extract following features (<b>LBP</b>, <b>HoG</b>, <b>SIFT</b>, <b>BoW</b>) from the image and do k-mean clustering with <b>k = 3</b> and <b>k= 6</b> and plot those clusters in 2-D space.</p>
